What's inside this document

- **System Overview** — What the CRM does and who it's for
- **Core Features** — Lead pipeline, customers, emails, and more
- **User Roles & Permissions** — Superadmin, Admin, Sales, and Data Entry
- **Lead Workflow** — Step-by-step pipeline from entry to close
- **Email & Notifications** — Automated reminders and manual sends
- **Admin Panel** — User management, settings, and backup

System Overview

The Tri-state Power Solutions Sales CRM is a purpose-built, web-based lead management system designed to give your entire sales team a single source of truth. From initial lead entry through follow-up, closure, and reporting — every step of the sales process is tracked, automated, and visible to the right people.

Core Features at a Glance

Lead Pipeline

- Track every prospect from first contact to close
- Visual status pipeline (New !' Contacted !' Proposal !' Won/ Lost)
- Follow-up date tracking with overdue alerts
- Assign leads to specific sales reps

Customer Profiles

- Full contact & company records
- Complete lead history per customer
- Quick entry form for fast data capture
- Searchable customer database

Email Notifications

- Automated upcoming follow-up reminders
- Daily past-due alerts for overdue leads
- Weekly/Monday activity summary emails
- Branded with your company name & color

Access Control

- 4 distinct role levels with granular permissions
- JWT-based authentication — no sessions to manage
- Force password change on first login
- Lock/unlock accounts without deleting data

Dashboard & Reports

- Live status breakdown chart
- Recent activity feed
- Weekly lead goal tracking per rep
- Team performance at a glance

Admin Panel

- Create, edit, and manage all users
- Configure SMTP email settings
- Backup & restore the full database
- Branding customisation (logo, name, color)

User Roles & Permissions

Access is controlled through four hierarchical roles. Each role builds on the permissions of the one below it.

Permission	Data Entry	Sales	Admin	Superadmin
View & create leads	✓	✓	✓	✓
Edit & manage own leads	—	✓	✓	✓
View all team leads	—	—	✓	✓
Manage users (create/edit)	—	—	✓	✓
Lock / unlock accounts	—	—	✓	✓
Send manual reminder emails	—	—	✓	✓
Configure email/SMTP settings	—	—	—	✓
Backup & restore database	—	—	—	✓
Change branding & logo	—	—	—	✓
Access setup wizard	—	—	—	✓

Security & Account Safety

- **JWT Authentication** Stateless token-based login — no cookies, no session storage.
- **Force Password Change** New accounts are forced to set a unique password on first login.
- **Role-based Route Guards** Every API route enforces the minimum required role server-side.
- **Bcrypt Password Hashing** All passwords are salted and hashed — never stored in plain text.
- **Account Locking** Admins can lock an account immediately, blocking all future logins.
- **Audit Trail** All lead and customer changes are timestamped for accountability.

Lead Pipeline Workflow

Every lead follows a clear path from initial capture through to a closed outcome. The system tracks each transition automatically.

Lead Status Reference

New	Lead has been entered but not yet contacted.	Contacted	Initial outreach has been made.
Proposal Sent	A quote or proposal has been delivered.	Negotiation	Active discussion on terms and pricing.
Won	Deal closed successfully.	Lost	Opportunity did not convert.
On Hold	Paused pending external factors.		

Email & Notification System

The CRM has a fully branded, automated email system that keeps reps on top of their pipeline without manual effort.

Follow-up Reminder

All emails use your configured company name and accent colour in the header and subject line. SMTP settings are configured through the Admin Panel.

Admin Panel Capabilities

- **Manage Users** Create, edit, lock/unlock, reset passwords, and delete users from a single table.
- **Email Configuration** Enter SMTP host, port, credentials, and sender name. Test with a live send.
- **Manual Email Sends** Trigger a follow-up reminder, past-due alert, or activity summary to any user.
- **Database Backup** Download a full JSON backup of all data. Restore from any previous backup file.
- **Team Messages** Internal message board for team-wide announcements and notes.
- **User Roles** Change any user's role inline — changes take effect on their next request.
- **Reminder Settings** Toggle automatic reminders on/off, configure days-before thresholds.
- **Branding Editor** Set company name, upload logo, and choose accent colour. All emails update instantly.
- **Setup Wizard** Guided initial configuration covering SMTP, branding, and first user creation.

Getting Started

1

Run the Setup Wizard

On first login as Superadmin, the setup wizard guides you through SMTP configuration, company branding, and creating your first admin account. Takes under 5 minutes.

2

Create Your Team

Use the Manage Users panel to add sales reps and data entry staff. Set their roles, staff IDs, and weekly lead goals. They receive login details and are prompted to set their own password.

3

Start Entering Leads

Use the Quick Entry form or the full Customer New page to start building your pipeline. Assign leads to reps and set follow-up dates immediately.

4

Activate Email Reminders

In the Admin Panel 'Email & Reminders', enable automatic follow-up reminders and past-due alerts. Configure how many days before a due date to send the reminder.

5

Monitor the Dashboard

The dashboard shows a live pipeline breakdown, recent activity, and each rep's progress toward their weekly goal. Check it daily for a quick team health snapshot.

Summary

Tri-state Power Solutions Sales CRM

A complete, self-hosted sales pipeline platform designed specifically for your team.

No per-seat fees. No data leaving your server. Full control from day one.

- Lead tracking & pipeline management
- Automated email reminders & alerts
- Role-based access for your whole team
- Admin panel with full user management
